<b>North Manchester Hospital</b>	Use same times as CMUH			

### IMPORTANT NOTES MUST READ

The Fajr start times are based on 18° (*subh sadiq*) and the principle of *aqrab-ul-ayyaam* when 18° solar depression is not reached (14-15<sup>th</sup> May to 29-30<sup>th</sup> July). During this time period in Summer it is better to delay offering Fajr salah for 15-20 min from start time. It is forbidden to pray when the Sun is at its highest point in the sky from a particular location i.e. when the Sun is at the upper celestial meridian (also known as upper transit time or solar noon.)

**You should wait a few minutes (3-5 min) after the predicted astronomical upper transit time (solar noon) given in the timetable before offering Dhur salah. Recommended to wait 5 minutes.**

Predicted astronomical sunset is when the Sun is 0.5° below the Earth's horizon. **You should delay offering Maghrib salah and breaking fast (futoor) for 3-5 minutes from the astronomical predicted sunset times. Recommended to wait 5 minutes.**

Isha start times are based on 15° (*shafaq ahmar*) and *sub' al layl* during summer when 15° solar depression is not reached.

### IMPORTANT NOTES MUST READ

The Fajr start times are based on 18° (*subh sadiq*) and the principle of *aqrab-ul-ayyaam* when 18° solar depression is not reached (14-15<sup>th</sup> May to 29-30<sup>th</sup> July). During this time period in Summer it is better to delay offering Fajr salah for 15-20 min from start time. It is forbidden to pray when the Sun is at its highest point in the sky from a particular location i.e. when the Sun is at the upper celestial meridian (also known as upper transit time or solar noon.)

**You should wait a few minutes (3-5 min) after the predicted astronomical upper transit time (solar noon) given in the timetable before offering Dhur salah. Recommended to wait 5 minutes.**

Predicted astronomical sunset is when the Sun is 0.5° below the Earth's horizon. **You should delay offering Maghrib salah and breaking fast (futoor) for 3-5 minutes from the astronomical predicted sunset times. Recommended to wait 5 minutes.**

Isha start times are based on 15° (*shafaq ahmar*) and *sub' al layl* during summer when 15° solar depression is not reached.

### IMPORTANT NOTES MUST READ

The Fajr start times are based on 18° (*subh sadiq*) and the principle of *aqrab-ul-ayyaam* when 18° solar depression is not reached (14-15<sup>th</sup> May to 29-30<sup>th</sup> July). During this time period in Summer it is better to delay offering Fajr salah for 15-20 min from start time. It is forbidden to pray when the Sun is at its highest point in the sky from a particular location i.e. when the Sun is at the upper celestial meridian (also known as upper transit time or solar noon.)

**You should wait a few minutes (3-5 min) after the predicted astronomical upper transit time (solar noon) given in the timetable before offering Dhur salah. Recommended to wait 5 minutes.**

Predicted astronomical sunset is when the Sun is 0.5° below the Earth's horizon. **You should delay offering Maghrib salah and breaking fast (futoor) for 3-5 minutes from the astronomical predicted sunset times. Recommended to wait 5 minutes.**

Isha start times are based on 15° (*shafaq ahmar*) and *sub' al layl* during summer when 15° solar depression is not reached.
